

Registration, Evaluation, Authorization, and Restriction of Chemicals

August 12, 2019

From: Quality Manager, InterWire Products

As you know the list of substances declared as SVHC (Substances of Very High Concern), originally published by ECHA (European Chemical Agency) 1907/2006/EC, is constantly evolving. Additionally, InterWire continually adds new suppliers in order to provide our customers variety, price and quality improvements. However, as of this date, we can state that substances from the SVHC list have not been reported as being contained in the products we purchase and sell. This includes the 201 substances found on the candidate list updated July 16, 2019.
